

Meadowlark

Home Care

Axiscare Mobile Tip Sheet:

I. Downloading the app

- a. Only Available on the Play Store/iTunes Store
- b. Must allow location permissions
- c. App may need to be updated manually periodically from the stores

II. Logging in

- a. The server number is 4170
- b. From a web browser, go to 4170.axiscare.com and choose to either activate your account or select forgot password if you need to reset your password

III. Navigating the App

- a. The Home Tab will show your daily visits but will be blank if you do not have visits that day.
- b. The schedule tab allows you to look at unassigned visits (Open Visits), or your individual calendar.
- c. The alerts tab is an easy way to see all the notifications the app had sent.

IV. Visits

- a. When you open a visit, it will show you the client, date, time and address. You can open your GPS app directly from the visit screen as well as bring the clients phone number up in your dialer to call them easily.
- b. Clock-ins are restricted to 15 minutes before your shift. The default of the app is to round to the nearest 15 minutes (ex. 1508 clock in time would coincide with a 1515 clock in time).
- c. The ADL section of the app gives detailed information on the services that the client is requesting and authorized for. The notes in the section give tips and advice specific to that client. Please address all approved ADLs and mark them off if they were completed or addressed.
- d. The Forms section will allow you to see and sign care plans if necessary.
- e. A Note must be completed for every visit (even SU time), with a brief description of the visit, reason why some ADLs may not have been completed, and any information you feel may be necessary for the next caregiver to know.
- f. The past care notes section will show you the notes written by caregivers for that client for the past 14 days.
- g. The mileage section is for you to chart mileage that you do while on a visit with a client (do not enter inter-visit travel mileage).

V. Best Practice

- a. When arriving to a visit, you are expected to log in to the app, clock in, and review notes and ADLs to be done that day. This process should only take 1-2 minutes and must be done at the client's home.
- b. If you are doing an outing with a client, chart the ADL for shopping or CI time while you are at your destination, not the client's home.
- c. Near the end of your shift, please take 2-3 minutes to finish charting any ADLs that you hadn't yet and write concise notes explaining your visit (please do not just write "all cares met" or similar statements). Then you are required to sign for the visit and clock out.
